

Direct-SDK

This SDK does not require the imager software to be run.

The library "libirimage" provides a C ++ interface for Linux and Windows.

Supported operating systems: Windows 7, 8, 10 / Linux

You can download the Direct SDK free of charge from the Evocortex GmbH website:

<http://www.evocortex.org/downloads-1/>

Note: For the standardization of interfaces on Linux and Windows, some changes had to be made in the current version of the Direct-SDK compared to the previous version.

The old version (for Linux only) can be downloaded here:

[i386](#), [amd64](#), [atom](#), [eabihf](#) and [armel](#)

Sample:

On the software CD you will find a documented sample program for the Direct-SDK. To demonstrate the Direct-SDK please start **irimageShow.bat** or **irimageShowX64.bat**.
